PEOPLE'S WELL-BEING IN A SUSTAINABLE FUTURE

Through personal commitment we create solutions that
optimize the use of resources in buildings

Meet the challenger who takes building automation personally

It's all about listening and using our collective expertise in the search for the perfect solutions – for you.

AT REGIN we want to be able to offer you the perfect product and the smartest solution adapted specifically to your needs. Whether you're in need of a control valve or if you're about to design a large complex system – we'll always be there to support and help you take on the challenge. That's what we mean when we say we take building automation personally. It's all about listening and using our collective expertise in the search for the perfect solutions for you. Because that's part of the Regin DNA.

This way of thinking and working has been part of who we are since 1947 when we developed our first humidistat in Gothenburg, Sweden. Today you can find solutions based on our product range in a wide variety of buildings and applications all around the world. We've come a long way and we continuously work to improve and to become even better tomorrow.

REGIN NEWS 2020

NEW POWERFUL EXOcompact MODELS

Let's introduce our new future proof models of freely programmable controllers for applications and system integration, EXOcompact Ardo, Eedo and Vido.

They are equipped with a two times faster processor, a significantly greater memory capacity and web pages with improved memory access speed. They are also optimized to handle many parallel tasks with retained top speed. The built-in webserver, Controller Web, based on future technology with HTML5, provides you with the tools needed for flexible commissioning and handling. It enables you to reach and control your system from any web browser on your cell phone, tablet or PC, providing real time data.

The Modbus Master-functionality has received a major facelift and is supported on both RTU and TCP. The new Multi-master Modbus makes it possible to connect to 3rd party products with different settings from one controller while its' advanced error handling, debugging and commissioning tools make integration a breeze.

SYSTEM NEWS THAT MAKES YOU READY TO MEET THE FUTURE!

We are proud to present a range of breaking news in our system portfolio. The software is loaded with new functionalities which give endless possibilities in controlling most systems - no matter the size. We also present a range of future-proof, freely programmable controllers and new Add:io units. Our system news will increase your flexibility, facilitate your work and help you top perform.

EXPAND YOUR SYSTEMS WITH OUR NEW ADD:IO

Combine your EXOclever with one, or as many as you need, of our three new Add:io units providing your solution with 16 supplementary I/O either with universal input or universal output. You can also use the Add:io units for EXOcompact to connect up to 50 I/O via EFX. The units fit smoothly together, requiring minimal space. Programming tools for Add:io are available in EXOdesigner which make them easy to install and handle.

HEATING SOLUTIONS WITH NEW ENERGY-SMART FUNCTIONS!

We have made a software update for our heating solutions – Exigo^{Ardö} and Exigo^{Vidö}. The new version, Exigo 4.2, simplifies the integration and installation of our heating applications, but also allows for new energy-smart features. Now it is possible, among other things, to make power limitations in several different ways through energy meters with M-bus.

You can also connect our wireless concept, Go Wireless. Configuration is easily done via Application tool.

SHORT FACTS

- ✓ Communication with up to 10 pumps via Modbus
- ✓ If you prefer using wireless, Exigo can now communicate with up to 16 sensors
- ✓ Can take the building's stored energy into account when the outdoor temperature drops, thus saving energy
- ✓ Several smart alarm functions

MONITOR YOUR ENERGY CONSUMPTION WITH OUR WIRELESS OPTICAL PULSE COUNTER

Let's simplify your tracking of energy consumption! The new wireless sensor, EPRW, monitors and reports the power consumption and the electric energy used in a building, by counting the light pulses from an electrical meter. Combined with our wireless receiver with Modbus communication, your solution will be one of the most reliable on the market.

SHORT FACTS

- ✓ Easy installation
- ✓ Extensive communication range
- ✓ Compatible with most meters commonly used
- ✓ About 6 years battery life

THE REPEATER FOR WIRELESS RECEIVER THAT GIVES YOU FURTHER REACH

If you need to increase the distance between a wireless receiver and paired sensors or detectors - we have the repeater for you! Through radio-frequency communication the RPW strengthens and transmits the signal. Several repeaters may be used simultaneously. Adding repeaters to your solution means bringing more flexibility to the system!

SHORT FACTS

- ✓ Increases the transmission reach between paired units
- ✓ Easy mounting
- ✓ 230 V supply voltage
- ✓ Battery backup

PRESSURE INDEPENDENT VALVE WITH SMART ACTUATOR

Our PCMTV valves are intended for control of heating, cooling and air handling in larger-scale heating and cooling applications where pressure independent control valves are preferred, such as high-rise buildings, supermarkets, factories and alike.

SHORT FACTS

- ✓ Precise hydronic balance gives increased comfort and reduced energy consumption
- ✓ Accurate flow control, stable maximum flow rate and

compensated variations in differential pressure result in a steady and enduring control system

- ✓ Smart actuator offers remarkable adjustment flexibility with many functions in one actuator
- ✓ Easy selection as no authority calculations are needed
- ✓ Nominal diameter: DN50–250
- ✓ Pressure rating: PN40
- ✓ Max flow: 25000 l/h (DN50–65–80) to 277 000 l/h (DN200–250)

ACTUATORS

RDAS

NEW SERIES OF DAMPER ACTUATORS

The RDAS actuators, with or without spring return, are used in ventilation and air conditioning plants to operate air dampers and air throttles. The robust housing ensures durability and the actuators are easy to mount. It has a patented self-centering shaft adapter that reduces actuator load, extends product life and improves reliability.

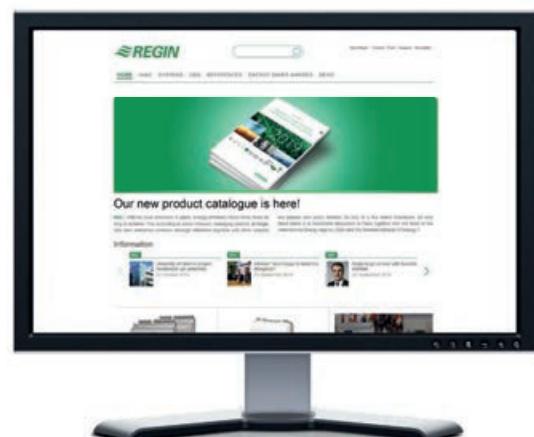

SMALL HEADLINE

- ✓ Torque 4–35 Nm
- ✓ For dampers up to 6 m²
- ✓ Special versions with auxiliary switches
- ✓ 24 V and 230 V supply voltage
- ✓ Manual override

Greenline makes a difference for people and the climate

– TOGETHER WE CREATE A SUSTAINABLE FUTURE

With our Greenline initiative, we strive to reduce climate impact. We do this in several ways. By running green tech projects around the world, through climate compensation and by supporting initiatives for a sustainable development. This means that when you buy a Greenline product we make a difference together.

At Regin, we are guided by a vision of people's well-being in a sustainable future. We work hard to develop solutions for energy-efficient climate control in buildings. Apart from that, we take responsibility and get involved in social projects with the goal of reducing climate impact on a wider scale. In order to emphasize our ambitions, we have created a product category that is linked to Greenline. The bottom line is that each product sold supports a part of our investments in sustainability projects and climate compensation. In this way we can make a difference together with our customers.

Knowledge creates change in India

A significant portion of the world's carbon dioxide emissions derives from India. Reducing energy use in Indian buildings can thus bring large environmental benefits globally. For several years, Regin has invested considerable resources in projects in India, supported by the BMUB*, to share knowledge on how to improve energy efficiency in buildings. We have started up trainings at a school in southern India, participated in pilot projects and taught hundreds of people to manage building automation systems. For each optimized building, carbon dioxide emissions are significantly reduced. We are proud to have participated in making buildings in India more energy-efficient.

Better quality of life and less deforestation in Ghana

Regin's work within Greenline has also contributed to climate compensation through Tricorona Climate Partner. The projects that we have supported are "Gold Standard" certified, which means that they are high quality projects, audited annually. In line with the company's overall goal of promoting global energy efficiency, Regin has chosen to support a project in Ghana, in which energy-efficient stoves are developed, produced and sold. The stoves reduce the use of charcoal by half, which decreases deforestation. Moreover, it gives positive effects on carbon dioxide emissions. The stoves also have a major impact on human health, as they reduce the incidence of air pollution in homes. Local manufacturing and sales create jobs and secure the livelihood of many families.

Greenline is a long-term commitment for a sustainable and energy-efficient future, which is a challenging and important journey together with our employees and customers.

Thank you for joining us.

COMPANY PRESENTATION

The Regin vision takes us towards new challenges – every day

For us, every day is about listening and understanding the needs of each customer, project and building. We provide our knowledge in combination with our extensive product portfolio to create efficient solutions that optimize the use of resources in buildings worldwide. We focus on simplicity for all users – no matter how technically complex the solution. We do so with a strong personal commitment that is driven by our vision about creating something significant. A vision about caring for the energy use of future generations yet to come – A vision about *People's well-being in a sustainable future.*

Welcome to join us on our journey and take on the Challenge!

The Challenger.

That's what we call ourselves. But what do we challenge with?

One of the broadest product ranges on the market

WE KNOW that our broad range from Systems to HVAC makes life easier for our customers. With our comprehensive approach to energy saving we can offer products, service and consulting within all areas of building automation. Every year, we invest 10 % of our annual turnover in product development – that's how we future-proof our solutions.

Global strength with a local presence

WE ALWAYS DO our utmost to make sure everything is in place when the customer needs it, wherever they need it. Thanks to our worldwide local presence, we can offer precise and fast deliveries to our customers' projects no matter where they are. Today, we sell our products in 90 countries and the number is steadily rising.

A personal commitment

COOPERATING with someone you trust and that you know is committed makes a difference. To us, personal communication and fast, internal decision-making is the best way to work. This has become our way towards success – working with our customers, partners and when working together with OEMs.

From mechanical humidistats to complete solutions

GOTHENBURG, 1947: Erik Haglund and Axel Jones buy the right to a humidistat. Under the *Regin* name, they remake it completely and release it to the market as HMH – a simple, stable humidistat that goes on to become a huge international success that is still manufactured and used today.

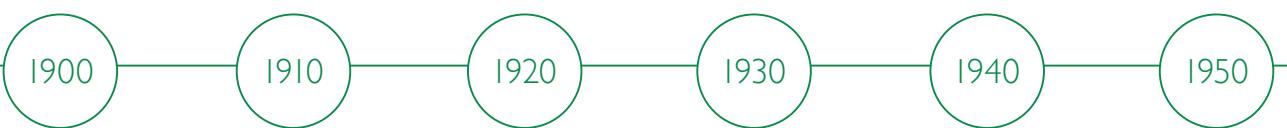

The evolution

In the late 80s, today's majority owners – Leif Brattschöld, Peter Bolin and John Reed, acquire Regin. They bring a strong commitment into the company together with a clear vision: Regin should develop their own products, have a broad range and establish close cooperative relations with installers and system integrators. Also, product development should be customer-driven through cooperation with OEMs and through a continuous dialogue with all kinds of users.

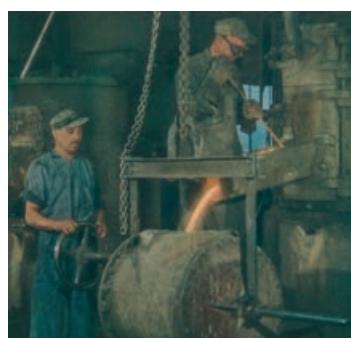

The expansion

During the first decade of the 2000s, Regin acquires the product companies Osby Armatur, Exomatic and RICCIUS+SOHN, three companies that have been true pioneers within their product fields and that will become important factors in achieving a complete, comprehensive product line. Customer-driven development is further strengthened and the decision is made to invest 10% of annual turnover in the company's product development.

These years also see the foundation of the Regin Academy, the company's international training centre. Coaching and courses are set up to increase product and energy saving system knowledge for all kinds of properties among system integrators, installers and OEM customers. Through the Regin Academy, Regin certifies system integrators who work with Regin systems.

TOWARDS THE END OF THE 19TH CENTURY Osby Armatur slowly starts to become synonymous with control valves around the world. This is very much due to the high quality valves used in the large ships crossing the world's oceans at that time.

IN 1947 REGIN IS FOUNDED and the first product, HMH, is launched. The humidistat HMH becomes an international success story and a modern version is still marketed today, some 70 years down the line. Few people know that the sensor is made from human hair.

IN BERLIN, DURING THE MID-50s Dr. Claus Riccius, Isolt Riccius and Günter Stroschen found the company RICCIUS+STROSCHEN, later named RICCIUS+SOHN. The first heat controllers for boiler control are manufactured in true pioneering spirit – in the family basement. Here the foundation is laid for the RU, one of Germany's most well known series of heat controllers. It's still on the market today.

Present day

Today we can offer our own, personally developed product program that covers everything from valves and field products to some of the most sophisticated system solutions available within building automation. We sell our products in more than 90 countries worldwide – a number that is steadily increasing. Our Head Office is situated just outside of the city of Gothenburg, Sweden and we have offices and warehouses in 17 different countries.

Everything and nothing has changed since we were established in 1947. However, the one thing that will never change is our personal commitment to create easy and sustainable solutions for our customers, partners and OEMs – and for the people who use our products every day.

OUR HEAD OFFICE is situated in Källered just outside the city of Gothenburg. In 2015 the building was renovated and fitted with a new entrance and an updated Regin Centre.

IN 1983 EXOMATIC is founded in Svalöv, Sweden and today they are seen as pioneers when it comes to systems. The entrepreneur Carl Eric Olin had already, using huge computers, created one of the first building automation systems for a commercial property.

BETWEEN THE YEARS 1990 and 2010 Regin acquires Osby Armatur, RICCIUS+SOHN and Exomatic. Regin Academy is also established.

DURING THE SAME PERIOD Regin launches four series that all become huge successes and key products: EXOcompact, Regio, Corrigo and Optigo.

BETWEEN 2010 until today, Regin future-proofs technology and provides complete solutions for all kinds of applications. Internet of Things, Big Data and connected devices are on top of our agenda.

Everything under one roof

Control and climate control for all kinds of real estates

AFTER 70 YEARS IN THE BUSINESS, we know that our product range has to work for the installers in the field and for the system integrator with high demands on intelligent comprehensive solutions. This is why today we offer a complete product program from Systems to HVAC. We're able to do so thanks to our own customer-driven product development, combined with well-balanced acquisitions. With our product range we can provide both partners and OEM customers with the best ways to save energy and create comfort all around the world. But that's not enough.

We're convinced that the road to the right product and the smartest solution is based on a strong commitment, talking to the customer and cooperating – this is what makes the difference in the end.

System

Technical advances are moving faster and faster and every market has its own specific needs. To us, future-proofing and openness towards integration with standardised protocols are guiding principles. Today, you'll be able to find Regin's product range in all kinds of real estates, all around the world.

HVAC

Many of us who work at Regin have experience in fieldwork. We know that field products need to be of the highest quality, that they need to be easy and quick to install and that they should come with easy-to-understand instructions. With Regin's comprehensive HVAC range you'll always have what you need to succeed.

REGIN'S SOLUTIONS can be found in many different kinds of buildings all over the world. For example, in Google's offices in Madrid, Spain.

OUR STARTING POINTS FOR PRODUCT DEVELOPMENT

- ✓ Thanks to our comprehensive product program we can be a one-stop shop where our customers will always be able to find the best solution.
- ✓ Our products should always be easy to understand and intuitive to work with. We call it Ready-Steady-Go.
- ✓ Our products should always be flexible and compatible with earlier generations in order to guarantee a long life-cycle and to enable the possibility of growing and expanding with our solutions.
- ✓ We work with open systems and standardised protocols to facilitate integration with different products on the market.

An effective way to reach climate change goals

Long before climate change issues climbed to the top of the international agenda, Regin's systems and products contributed to reductions in energy consumption in buildings all over the world. Thanks to the 2-degree goal set up by IPCC* and the EU's 20% CO₂ emission reduction goal, climate issues have moved even further to the fore.

Today, properties and buildings are responsible for approximately one third of the world's energy consumption. Research shows that investments in this field deliver the highest reductions in CO₂ emissions per invested coin.

At Regin, we're proud to be part of a business that contributes to reaching climate change goals.

A personal commitment that makes the difference

WE CONTINUOUSLY focus our work on the development and support of our global customer, partner and OEM network. We do this to create added value for everyone involved in a project – from start to finish – in order to succeed together. Regin benefits

from the success of our partners' business and we evolve alongside them. This global network gives us important business insights into market differences and future needs and requirements. This is an approach that creates positive effects at every level.

An approach that generates wins for everyone involved

OEM customers

Can access proven expertise and experience from running successful OEM projects. A global network of partners for product integration and installation.

Installers

A complete product range from one single supplier. Direct contact and short decision making processes. Regin assists with problem solving.

System integrators

Everything under one roof. Knowledge exchange and network cooperation. Regin assists with problem solving and marketing.

Property owners and consultants

Energy-efficient solutions for the entire property. Access to a global partner network of system integrators.

Regin Academy – certifying success

OUR CUSTOMERS AND PARTNERS, together with us, communicate the Regin brand. All over the world, our customers are the ones installing our products and integrating and programming our systems. In order to provide quality assurance and to be able to offer maximum support, Regin Academy offers product education, coaching and consulting regarding any topic related to increased energy efficiency in buildings.

Regin Academy also serves as an important channel for feedback regarding how our products are perceived – feedback that is communicated throughout our organisation. This is how we strive to achieve maximum quality in every solution.

ARRIGO EMS MAKES BUILDING ENERGY SAVINGS EASY

Arrigo's innovative energy management platform gives you the combined power of all data collected from a building by the control system. By connecting to the Arrigo EMS cloud service, you can easily access all building data and follow up on results gained from various actions in real time. The system gives you quality-assured analyses and forecasting without any manual input, helping you save valuable time.

Arrigo makes it easy for building owners to see tangible results from various actions and implementations, helping them gain control of their energy consumption. In the long run, using Arrigo can contribute to greater cash flow and increased building asset values.

SCADA SOFTWARE FOR COMPLETE CONTROL

Regin SCADA

Software specifically designed for use together with Regin's EXO hardware. The result is a highly effective and user-friendly building automation system with software that takes full advantage of all possibilities offered by the hardware.

EXOscada

A complete and powerful SCADA system. EXOscada enables an operator to monitor and control system processes using a modern and intuitive interface. EXOscada supports most types of symbols, both animated and static, and offers many options for configuring the SCADA design according to your own requirements.

You can monitor everything online, from the present status of the system down to a single temperature in a building. You can use real-time charts to monitor short-term changes, and you receive alarms in the system naturally with a built-in e-mail function that lets you know when something is wrong. Historical data can be displayed using the built-in, easy-to-use, real-time report tool to show preconfigured reports on the screen. You can also view all your historical data in a very flexible chart where you can compare values over time easily. More advanced reports, with specific building compensated values, are possible to create using the Arrigo Connect function.

EXOscada can also communicate via OPC with equipment of other brands using various communication protocols.

Key features

- ✓ Dynamic visualization of plants and processes
- ✓ Alarm window with advanced filtering function and direct link to the alarming site
- ✓ Alarm distribution via e-mail
- ✓ Powerful tool for showing logged values
- ✓ Built-in report generator for creation of advanced reports
- ✓ Time channel program
- ✓ Real-time data logger for short-term logging
- ✓ Easy online user setup with very flexible user administration
- ✓ Easy to change control curves
- ✓ Support for large server environments
- ✓ Configuration tool with templates made for all Regin controller functions
- ✓ Scalable and vector-based graphics
- ✓ Advanced Script language available
- ✓ High security in all aspects: SSL encryption on the login to the site. Secure passwords with settable security levels. Full audit trail with extra sign-in when you change values in the site. See who have made what changes and also why, since comments can be mandatory when changes are made.

Design tools

The built in configuration tools makes it easy to create user-friendly views in EXOscada. The huge library containing graphic symbols and SCADA images simplifies work even further. It also contains templates made to fit all the controller functions available when you program a Regin controller.

SCADA/HMI software for operator stations

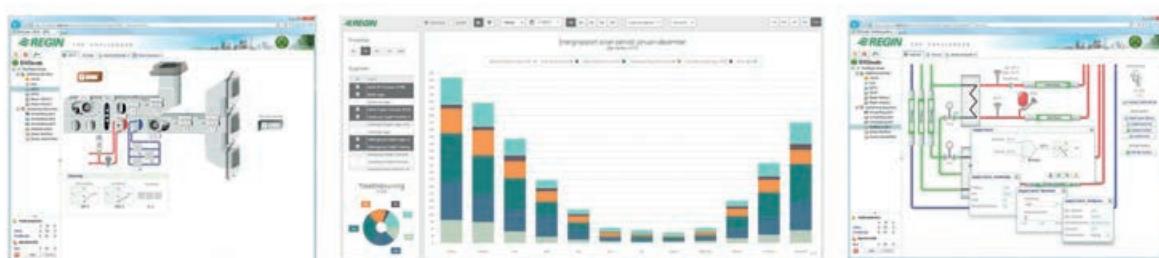

EXOscada has a graphical user interface, making all settings and commands very easy to use.

The licensing system is flexible and can easily be adapted to various needs. A dongle and one or more licence codes are needed for every server running EXOscada.

EXOscada can communicate via OPC with equipment of other brands using various communication protocols.

EXOscada Cloud Service

EXOscada Cloud Service is a complete web hosting service for property management. By connecting your buildings to EXOscada Cloud Service, you can manage your properties via a web-based SCADA system and subscribe to different services, while at the same time avoiding investments in e.g. servers. The only thing needed is a computer with a web browser. We take care of daily operation, maintenance, hardware and software upgrades on the server etc.

Please contact Regin for a quotation.

EXOopc Driver

EXOopc Driver enables connecting EXO controllers to any software supporting the OPC standard. This means that most SCADA software in the market today can be used together with Regin's controllers.

The system is programmed using EXOdesigner. The program can be prepared in advance on a PC and loaded into the system at installation. All the data will then be available via the OPC interface.

EXOdesigner

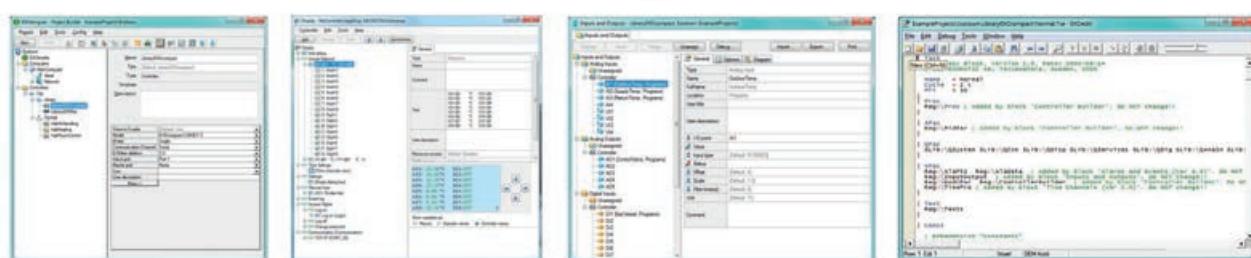

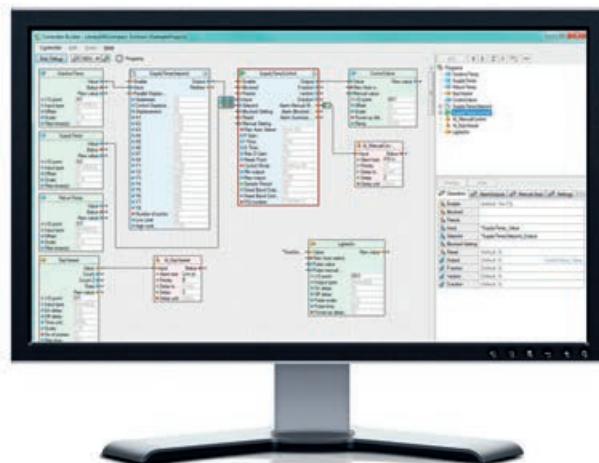

Software tool for design and configuration of a complete EXO system.

All EXO controllers are fully software compatible and are programmed using EXOdesigner, a PC-based development environment. The compatibility also applies across product generations, which means you only need to learn one programming tool and are free to change controllers in a system without having to rewrite all programs.

Controller Builder – Graphical programming without limitations

Controller Builder is an integrated function that makes it easy to construct a system in EXOdesigner. An extensive library of functions is available. Controller Builder provides increased efficiency and speed with maintained flexibility. The function is compatible with all other parts of the EXO system.

Arrigo FMS (Facility Management System)

Cloud central for building management, inspections, error reporting and servicing

- ✓ Extremely user-friendly with powerful functionality
- ✓ Gives you complete control of your entire building portfolio
- ✓ Improves overall service for your tenants and end users
- ✓ Simplifies everyday work for you and your colleagues
- ✓ Gathers all building-related information in a single place
- ✓ Always available with high reliability
- ✓ Increases the value of your property portfolio

Energy consumption aside, maintenance and service make up major expenses for any building. Regular servicing and maintenance are essential for a building to be energy-efficient. Regin's cloud central gives you a platform you can build on.

Make sure everyone working in your buildings has access to Arrigo. That way, all your building-related information is gathered in a single place – in Arrigo. You can also feel completely secure knowing you have total control of your entire property portfolio.

All information gathered in one place

- ✓ Planned maintenance
- ✓ Error reports
- ✓ Damage reports
- ✓ Inspections
- ✓ Documents
- ✓ Journal

We'll help you to get started

- ✓ Arrigo is a simple system both to commission and for getting started
- ✓ No investments or IT staff needed
- ✓ We help you make work easy and efficient
- ✓ Increased operational reliability

Licences

- ✓ From the smallest to the largest
- ✓ The size of Arrigo is continually adapted after your individual needs

Arrigo EMS (Energy Management System)

Cloud central for energy statistics and analysis

- ✓ Gives you complete control of your entire building portfolio
- ✓ Reduces your environmental impact through excellent energy monitoring
- ✓ Gives you the tools for responding quickly
- ✓ Provides you with statistics for prioritizing your work
- ✓ Offers direct verification that your investments are paying off

Monitoring the energy consumption of your buildings gives you a direct insight into the overall health of your property portfolio. Many factors contribute to the overall results, such as a good indoor climate and low energy consumption.

Monitoring the energy consumption of your property portfolio can prove to be quite a challenge. Many factors may contribute, such as the number of buildings, energy meters and types of energy, overall geography, access to automatic monitoring, routines, etc. Providing a good support system, which enables many different solutions to work in parallel, is what creates the foundation for good energy monitoring.

But regardless of the quality of collected energy data, all data still needs to be processed and presented in a readily understandable, straightforward way. Arrigo EMS provides you with a very intuitive report tool to analyse your data, letting you visualise all statistics clearly.

The hub in efficient energy monitoring

- ✓ Simple and clear energy/analysis reports
- ✓ Versatile connection to energy meters
- ✓ Quality assurance of energy values
- ✓ Climate correction of heating and cooling
- ✓ Automatic updates of climate data from Sweden's SMHI meteorological institute. Energy index and degree days.
- ✓ Possibility to create building unique climate data
- ✓ Easy distribution of reports via e-mail
- ✓ Exports to external billing systems
- ✓ Exports to other energy monitoring systems

Licences

- ✓ The licence is based on the number of logged meters, i.e. meters containing readings
- ✓ Calculated (fictitious) meters are free of charge

EXOcompact – FREELY PROGRAMMABLE CONTROLLERS

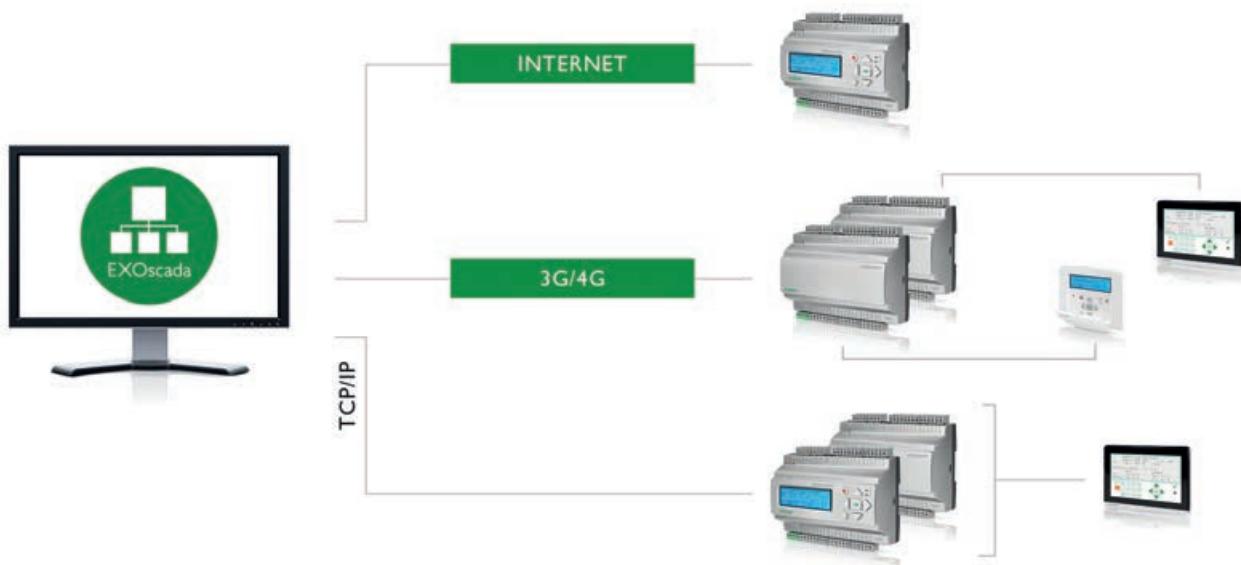

EXOcompact controller

The EXOcompact controllers are perfect for applications, e.g. zone control, control of heating and air handling units, as well as for system integration or as stand-alone units. They have a powerful processor and are available in two sizes with 15 or 28 I/Os, with or without display.

Programming takes place in EXOdesigner. The controllers communicate via EXOline or Modbus via RS485. M-Bus is also available as an option. EXOcompact is available with one, two or three communication ports, enabling easy input/output expansion, connection of electricity/energy meters or communication with other controllers.

- ✓ Freely programmable with fixed I/O configuration
- ✓ For control of heating centrals, air handling units etc.
- ✓ 15 or 28 I/Os, with or without display
- ✓ Digital outputs via Mosfet with 2 A, 24 V AC/DC
- ✓ Powerful processor
- ✓ Optional DC supply voltage
- ✓ Possible to expand the number of I/Os using two ports and expansion units based on EXOcompact without display
- ✓ One, two or three communication ports
- ✓ Programming is performed in EXOdesigner
- ✓ TCP/IP optional
- ✓ Communication via RS485 (EXOline or Modbus), M-Bus (internally for M-3 models or via external X1176 unit)
- ✓ Complement to EXOClever/EXOflex in large automation systems

EXOcompact^{Eedo} freely programmable controller

EXOcompact^{Eedo} is a 230 V AC freely programmable room controller. The controller provides built-in communication via EXOline, Modbus or BACnet for integration into EXOscada or other SCADA systems. It can be used either as a stand-alone unit or as part of a larger system. The controller connects seamlessly to the room units in Regin's ED-RU-... series.

EXOcompact^{Vido}

EXOcompact^{Vido} freely programmable controllers

Small, compact controller with different types of communication and with or without built-in display. It can be used either as a stand-alone unit or as part of a larger system.

The EXOcompact^{Vido} series of controllers are available with 1 or 2 communication ports, and with or without M-Bus.

They are fully compatible with all other products in the EXO range. The controllers are freely programmable using the high-level EXO language EXOL®. Programming takes place in EXO-designer, the same environment used for other EXO controllers.

EXOcompact^{Vido} is primarily intended for use in installations with a limited number of I/O:s, placing a high importance on a freely programmable, compact controller providing both communication capabilities and high performance. EXOcompact^{Vido} can be used either together with other EXO products as part of a larger automation system or as a stand-alone unit.

In large automation systems, EXOcompact^{Vido} makes an excellent complement to EXOclever/EXOflex, being ideally suited for localised tasks such as control of heating and ventilation applications.

EXOflex – FREELY PROGRAMMABLE CONTROLLERS

Freely programmable controllers for building automation without limits

The EXOflex controllers are primarily intended for use in systems with a large number of I/Os and high demands on communication and adaptability. EXOflex consists of processor and expansion housings available in one to four sections. Programming is made using EXOdesigner or in free EXOL code.

EH20-S

The controller is tailored to its application by a selection of PIFA cards (Peripheral Interface Adapters). The cards are easily slotted into place in the housing and all connection ports are then accessible externally, offering easy connection of sensors, actuators, transmitters etc. The PIFA cards enable communication via protocols and field buses such as TCP/IP, KNX/EIB, Modbus, SIOX and M-Bus. EXOflex also supports communication via radio, telephone lines, GSM, cable, satellite, etc.

- ✓ For large buildings and integration of many buildings/installations
- ✓ For systems with a large number of I/Os (cost-efficient for more than 75 I/Os)
- ✓ Easy to expand capacity and adding functions
- ✓ Communication via EXOline, TCP/IP, KNX, Modbus, SIOX, M-Bus
- ✓ Gateway to the Arrigo web portal
- ✓ Large number of PIFA cards for different applications

COMMUNICATION OPTIONS

X9017

Option KNX

X9017 is a KNX communication card for connection to a KNX network via a KNX interface. The KNX interface is ordered by an external supplier. X9017 is intended for internal mounting in an EXOflex house, occupying Port 2 or Port 3.

Requires that EP7408, EP8101 or EP8102 is installed.

Article	Description	Note
X9017	Option KNX	

EX8282

TCP/IP gateway

Communication gateway for TCP/IP communication, intended for connection of one or several controllers with serial communication to a computer network.

Technical data		
Supply voltage	24 V AC/DC (18...30 V AC/DC)	
Internal serial port, type	RS232 or RS485	
Ethernet port, type	10Base-T/100Base auto-negotiation	
Ethernet port, cable length	Max. 100 m	

Article	Description	Note

EXPANSION UNITS AND I/O MODULES

IO-RU-7

IO-16AI

IO-4X4-M

Regin's expansion units and I/O modules offer the possibility to expand the EXOclever, EXOflex, EXOcompact and EXOdos controllers.

Integration of the expansion units and I/O modules into an EXO system is intended for advanced system integrators only, as it demands a deep knowledge of the EXO system. Up to 32 expansion units and I/O modules can be connected but the limit is set by the system integrator and the application.

Expansion units Ardo

The expansion units enable easy in-/outputs expansion of a system. They are fully compatible with all other products in the EXO range as well as other brands using standard protocols like BACnet or Modbus.

Technical data	
Supply voltage	24 V AC ± 15 %, 50...60 Hz or 21...36 V DC
Ambient temperature	0...50 °C
Storage temperature	-20...+70 °C
Ambient humidity	Max. 95 % RH
Protection class	IP20
Connection	Disconnectable terminal strips, 4 mm ²
Memory backup	Built-in long life battery gives long backup time of all settings incl. real time
Mounting	DIN-rail or cabinet
Casing	Standard Euronorm (8.5 modules wide)
Communication ports	
TCP/IP	EXOline, Modbus, BACnet/IP
RS485	EXOline, Modbus, BACnet MS/TP
Inputs	
Analogue inputs (AI)	For PT1000 sensors (accuracy ± 0.4°C) or 0...10 V DC (accuracy ± 0.15 % of full output signal). 12 bit resolution in the A/D conversion.
Digital inputs (DI)	For potential-free contacts
Universal inputs (UI)	Can be configured to function as either analogue input or digital input
Outputs	
Analogue outputs (AO)	0...10 V DC, 1 mA, short-circuit protected
Digital outputs (DO)	Mosfet outputs, 24 V AC or DC, 2 A continuous. Max. 8 A in total.

Expansion units Vido

The expansion units enable easy in-/outputs expansion of a system. They are fully compatible with all other products in the EXO range as well as other brands using standard protocols like BACnet or Modbus.

Technical Data	
Supply voltage	230 V AC
Ambient temperature	0...50 °C
Storage temperature	-20...+70 °C
Ambient humidity	Max. 95 % RH, non-condensing
Protection class	IP20 (IP40 when mounted in cabinet door)
Memory backup	Built-in long life battery gives long backup time of all settings incl. real time
Mounting	DIN-rail, cabinet or on wall

IO-RU-7

I/O module with 7 or 10 inputs/outputs

I/O module for expansion of Regin's programmable EXOclever, EXOflex, EXOcompact and EXOdos controllers.

Technical data	
Supply voltage	24 V AC ± 15 %, 50...60 Hz
Power consumption	2.5 VA
Ambient temperature	0...50 °C
Storage temperature	-20...70 °C
Ambient humidity	Max. 90 % RH
Protection class	IP20
Communication	EXOline RS485
Communication speed	9600 bps
Built-in temperature sensor	NTC type, measuring range 0...50°C
Accuracy	±0.5°C at 15...30°C
Material, casing	Polycarbonate (PC)
Weight	110
Inputs	
Analogue inputs (AI)	PT1000, 0...50°C
Condensation input (CI)	Input for Regin's condensation detector KG-A/1
Digital inputs (DI)	Closing potential-free contact
Universal inputs (UI)	Analogue input (AI), PT1000 sensor, 0...100°C or digital input (DI)
Outputs	
Digital outputs (DO)	24 V AC, max. 0.5 A.

Relay module

Relay module with six relays, intended for use together with Regin's Corrido, EXOcompact, Exigo, EXOdos controllers. The relay module can be used for control of objects with higher voltage loads or larger current drain than the controller outputs can handle. RM6H-24/D has manual switches for manual control of each object.

Technical data	
Supply voltage	24 V AC ±15 %, 5 VA
Inputs	Six 24 V AC
Output	Six potential-free change-over contacts, 230 V AC, 10 A
Mounting	DIN-rail
Number of modules	6 (105 x 112 x 58)
Protection class	IP20

CONTROLLERS

IOT GIVES YOU FULL CONTROL OF YOUR PROPERTIES

THIS IS CLOUDigo:

- ✓ Let the cloud do the work and visualise your plant for you
- ✓ Check status and change settings online
- ✓ Ready-Steady-Go installation of the controllers
- ✓ No programming necessary
- ✓ Work independently from IT support and firewalls

CONTROLLERS WITH TCP/IP

CLOUDigo

CLOUDigo – The easiest way to control your installations

For the user who wants complete control of the buildings' indoor climate at all times, CLOUDigo is the tool of choice. Our web-based platform can always be reached both by you and your colleagues regardless of your physical location.

Complete control – anywhere and at any time

Follow your installations in real time with just a few simple clicks. Navigate between the settings and values in connected controllers. CLOUDigo offers excellent overview of all your controllers. All settings made in CLOUDigo take full effect in the controllers instantly. This makes CLOUDigo the natural choice for individuals working with multiple installations or installations distributed over a wide geographical area.

Short facts about CLOUDigo

- ✓ Gain control of the indoor climate of your buildings – anywhere and at any time.
- ✓ You get the ability to analyse data and act instantly. Quickly, easily and effectively.
- ✓ CLOUDigo handles historical data for complete control and overview.
- ✓ Work using any screen while still retaining full functionality.
- ✓ Getting started is easy. The installation of connected controllers is extremely easy and developed in accordance with our "Ready-Steady-Go" concept.
- ✓ Work using a platform that permits you to grow. You handle your installations – CLOUDigo handles the rest.

CORRIGO – CONTROLLERS FOR VENTILATION AND HEATING

Corrigo^{Ardo} - controllers for ventilation and heating

Corrigo comes preloaded with an application for control of ventilation. The ventilation application is intended for control of air handling units with temperature control, 1- or 2-speed operation or, alternatively, pressure or air flow control of supply air fan and extract air fan, humidity control as well as other common functions in ventilation.

Technical data	
Supply voltage	24 V AC ± 15 %, 50...60 Hz or 21...36 V DC
Power consumption	8 VA, 4 W (DC), model E...W-3: 12 VA, 6 W (DC)
Ambient temperature	0...50 °C
Storage temperature	-20...+70 °C
Ambient humidity	Max. 90 % RH
Protection class	IP20
Connection	Disconnectable terminal strips, 4 mm ²
Memory backup	Built-in long life battery gives long backup time of all settings incl. real time
Display	Backlit LCD (blue), 4 rows of 20 characters
Mounting	DIN-rail or cabinet
Number of modules	8.5
Dimensions (WxHxD)	149 x 121 x 60 mm
Communication ports	
TCP/IP	Webserver, EXOline, Modbus, BACnet/IP, CLOUDigo
RS485	EXOline, Modbus, BACnet MS/TP
M-Bus ports	M-Bus communication
Inputs	
Analogue inputs (AI)	For PT1000 sensors (accuracy ± 0.4°C) or 0...10 V DC (accuracy ± 0.15 % of full output signal). 12 bit resolution in the A/D conversion.
Digital inputs (DI)	For potential-free contacts
Outputs	
Analogue outputs (AO)	0...10 V DC, 1 mA, short-circuit proof
Digital outputs (DO)	Mosfet outputs, 24 V AC or DC, 2 A continuous. Max. 8 A in total.

CONTROLLERS FOR OTHER APPLICATIONS

AQUA24TF

Controller with active frost protection for 3-point actuator

Controller intended for control of valve actuators in water-heated systems. It has a built-in room sensor and can be used for control of supply air temperature or room temperature, with or without cascade control. The controller has built-in active frost protection with two alarm relays and automatic heat maintaining function during shutdown.

Technical data	
Supply voltage	24 V AC ±10 %, 50/60 Hz
Power consumption	Max. 5 VA
Control signal (output)	3-point floating control, 24 V AC output (heating)
Sensor inputs	Three 0...30°C (the sensor determines the range (NTC sensor))
Setpoint	0...30 °C
Minimum limit	0...30°C (not active for single sensor control)
Cascade factor (CF)	1...15 (must be set to 1 for single sensor control)
Frost alarm setpoint	5 °C
Shutdown mode setpoint	25°C (setpoint on frost protection sensor)
Fan relay	Breaking contact for fan contactor interlock if a frost protection alarm occurs. 230 V AC, 2 A.

DUCT CONTROLLER

Controller for duct mounting

Compact controller for mounting in ventilation ducts. The controller has a built-in sensor and setpoint control. An external setpoint potentiometer can be connected if required. Can be used to control either heating or cooling. P- or PI-control optional.

The controller has an input for change-over between heating and cooling. The change-over function can be activated by means of an external closing contact or a sensor mounted on the supply-water side of the heating/cooling unit.

Software for configuration of Corrigo and Exigo

E tool, Exigo tool and Application tool are PC-based configuration software that provide an excellent overview of the settings of Corrigo and Exigo. Using E tool, Exigo tool or Application tool, all settings can be made on the computer and downloaded into the controller. An infinite number of configurations can be stored in the computer memory for later use.

E tool, Exigo tool and Application tool can be downloaded free of charge from our web site, www.regincontrols.com.

REGIO^{Ardo} AND REGIO^{Eedo} – THE ULTIMATE ROOM CONTROL SYSTEM

Regio^{Ardo}

Regio^{Ardo} is a pre-programmed 24 V zone controller. One controller is able to control two different zones.

It is quick and easy to commission. The I/O configuration and application setup for a VAV controlled room are predefined and the room units ED-RU are easily connected.

The controller is compatible with other Regin products and can easily be integrated into systems with EXOflex, Corrido, EXOcompact, EXOdos and EXOscada.

The controller can be used in systems with communication, e.g. EXOline (over RS485 or TCP/IP), Modbus (RS485) or BACnet. It is installed in a ceiling void, on a junction box plate or on a DIN-rail.

Regio^{Eedo}

Regio^{Eedo} is a pre-programmed 230 V zone controller for e.g. fan coils.

It is prepared for quick connection of the ED-RU room units. The controller is compatible with other Regin products and can easily be integrated into systems with EXOflex, Corrido, EXO-compact, EXOdos and EXOscada.

The controller can be used in systems with communication, e.g. EXOline (over RS485 or TCP/IP), Modbus (RS485) or BACnet. It is installed in a ceiling void, on a junction box plate or on a DIN-rail.

Regio Midi – Pre-programmed room controllers with communication

Regio Midi are controllers with a built-in temperature sensor and an RS485 communication port. Some models are available with CO₂ sensors. Controllers in different rooms and zones can be connected to a bus line enabling communication with a central SCADA system via RS485 (EXOline, BACnet or Modbus).

RC-CD*, RC-C3D* and RCC are BTL listed. All Regio Midi with display are listed at www.bacnetinternational.net.

Regio tool®

The room controllers are pre-programmed and can be configured to suit specific needs with the software Regio tool®, downloadable free of charge from www.regincontrols.com.

Product overview, Regio Midi

RC-C is the basic model in the range. The other models have various functions, indicated by the letters in the product name:

C = Communication, D = Display, F = Fan control button, H = Hidden setpoint, O = Occupancy button, T = 3-point output, C (at the end) = CO₂ input, 3 = Three universal outputs, S = Single beam CO₂ sensor

Technical data	
Supply voltage	24 V AC (18...30 V AC)
Power consumption	< 3 VA
Ambient temperature	0...50 °C °C
Storage temperature	-20...+70 °C
Ambient humidity	Max. 90 % RH (non-condensing)

Regio Mini – Pre-programmed room controllers

Stand-alone controllers for control of heating and cooling in a single zone or room

The Regio Mini controllers are pre-programmed and can be configured for a specific application via the display or dipswitches (in most cases, though, the default settings can be applied). The controllers have a built-in temperature sensor. Alternatively, an external temperature sensor can be connected.

ROOM CONTROLLERS FOR OTHER APPLICATIONS

Room temperature controller for 0...10 V DC or 3-point actuators

This room controller is primarily intended for control of heating or cooling in zone control systems. It has an input for a presence detector (occupancy control). The controller also has an input for change-over, which makes it possible for the control function to switch between heating and cooling.

Technical data	
Supply voltage	24 V AC, ±15 % 50...60 Hz, 2 VA
Output	0...10 V DC, 1 mA or 3-point, 24 V AC, 1 A
Inputs	Two digital and one NTC sensor
Setpoint	0...40 °C
P-band	0.5...50 K
Protection class	IP20

ELECTRIC HEATING CONTROLLERS

PULSER, 1- OR 2-PHASE

Controller with PI-control, 230..400 V AC, wall mounting

Wall mounted electric heating controller intended for control of radiators or electric heating coils. It is a complete controller with built-in sensor and setpoint adjustment. It pulses the whole load on/off and utilises time-proportional triac control. Both automatic control function adaptation, P- or PI-control and supply voltage adaptation, 230 V / 400 V.

Technical data	
Supply voltage	230...400 (210 - 415 V ~ 50/60 Hz 16 A)
Pulse period	60 s
Mounting	Wall
Power dissipation	20 W of heat at full load
Protection class	IP20
P-band	20 K (rapid temperature changes), 1.5 K (slow temperature changes)
I-time	6 min (rapid temperature changes)
Ambient temperature	0...30 °C
Ambient humidity	Max. 90 % RH, non-condensing
Storage temperature	-40...+50 °C
Dimensions	95 x 153 x 41 mm
Cable connection	Cage clamp
Inputs/outputs (I/Os)	
Output load	Resistive load, max 16 A, min 1 A
Sensor inputs	External main sensor and external sensor for temperature limitation
Sensor element	NTC Regin standard
Setpoint range	0...30 °C (the external sensor determines the temperature range)
Setpoint alternatives	Either internal setpoint potentiometer or external setting device
Night setback	0...10 K
Indication	Red LED that is lit when power is pulsed to the heater

Clamp-on sensor with housing

Clamp-on sensor for surface temperature measurement.

Technical data	
Protection class	IP65
Time constant	3 s
Measuring range, temperature	-20...+120 °C
Cable gland	M16
Dimensions, external (WxHxD)	104 x 78 x 51 mm
Accessories, included	Two metal straps and heat-conductive paste (art.nr: PASTA-20).
Material	
Material, housing	Polycarbonate (PC)
Material, base	Polycarbonate (PC)

Room sensor, NTC Regin, with setpoint adjustment

Room sensor for room temperature measurement. Can also be used for setpoint adjustment only.

Technical data	
Sensor element	NTC, 15...10 kΩ
Temperature range	0...30 °C
Protection class	IP30

Article	Description	Note
TG-R430	Room sensor	

Room sensor with setpoint adjustment

For room temperature measurement. Can also be used solely for setpoint adjustment.

HUMIDISTATS / HUMIDITY CONTROLLERS

Room humidistat

Electromechanical humidistat with a synthetic element. The setpoint knob can be locked.

Technical data	
Output	One, 230 V AC, 5 A, change-over
Setpoint	35...95 % RH
Hysteresis	7 % RH
Mounting	Room
Protection class	IP30

Article	Description	Note
HR-S	Room humidistat, 1-step	

Room humidistat, 1- or 2-step

Electromechanical room humidistat for controlling humidification and/or dehumidification in HVAC systems. The setpoint knob can be locked. Can be used to control a humidifier or a dehumidifier or for on/off controlling of a fan. Can also be used to give an alarm when the humidity exceeds or falls below a pre-set level.

Technical data	
Setpoint	10...95 % RH
Hysteresis	4 % RH
Mounting	Room
Protection class	IP21

HUMIDITY/TEMPERATURE TRANSMITTERS

Humidity and temperature transmitter for room mounting, 0...10V

Transmitter for relative humidity and temperature measurement in indoor environments. It has good long-term stability and is resistant to contamination.

Technical data

CO₂/CO/NO₂ CONTROLLERS AND TRANSMITTERS

CO2RT-R

CO₂ transmitter with relay room mounting

The CO2RT series measures CO₂ level. Models are available with or without display.

Technical data	
Supply voltage	24 V AC ±10 % / 15...35 V DC
Working range, CO ₂	0...2000 ppm
Accuracy, CO ₂	< ± (50 ppm + 2 % of the measured value) (25 °C)
Relay output	Max. 1 A at 50 V AC, min. 1 mA at 5 V DC

Article	Description	Note
CO2DT-R	CO ₂ transmitter with relay	

Also available with 0...5000 ppm working range on request

Carbon monoxide transmitter

This device measures the carbon monoxide concentration using an electrochemical method of measurement characterised by high selectivity even in low concentrations. It is installed for both safety and energy-saving reasons. The output signals are linear representations of the gas concentration.

6

The transmitter is TÜV-approved in accordance with VDI 2053.

Technical data		
Supply voltage		12...28 V DC
Article	Description	Note
COF	CO transmitter	

Nitrogen dioxide transmitter

NO2F measures the nitrogen dioxide concentration using an electrochemical method of measurement characterised by high selectivity even in low concentrations. The output signals are linear representations of the gas concentration.

The transmitter is TÜV-approved in accordance with VDI 2053.

LUX TRANSMITTER

LTWT10N...

Lux transmitter

In- or outdoor lux transmitter with a passive PT1000 temperature sensor as well as DIP switches for scaling the measuring range.

Technical data	
Supply voltage	24 V AC/DC (12...34 V AC/DC)
Power consumption	<2 W
Load impedance	Min. 10 kΩ
Protection class	IP54
Ambient humidity	0...98 % RH (non-condensing)
Ambient temperature	-30...+70 °C
Cable connection	Screw terminals max. 1.5 mm ²
Mounting	Wall

WIRELESS PRODUCTS

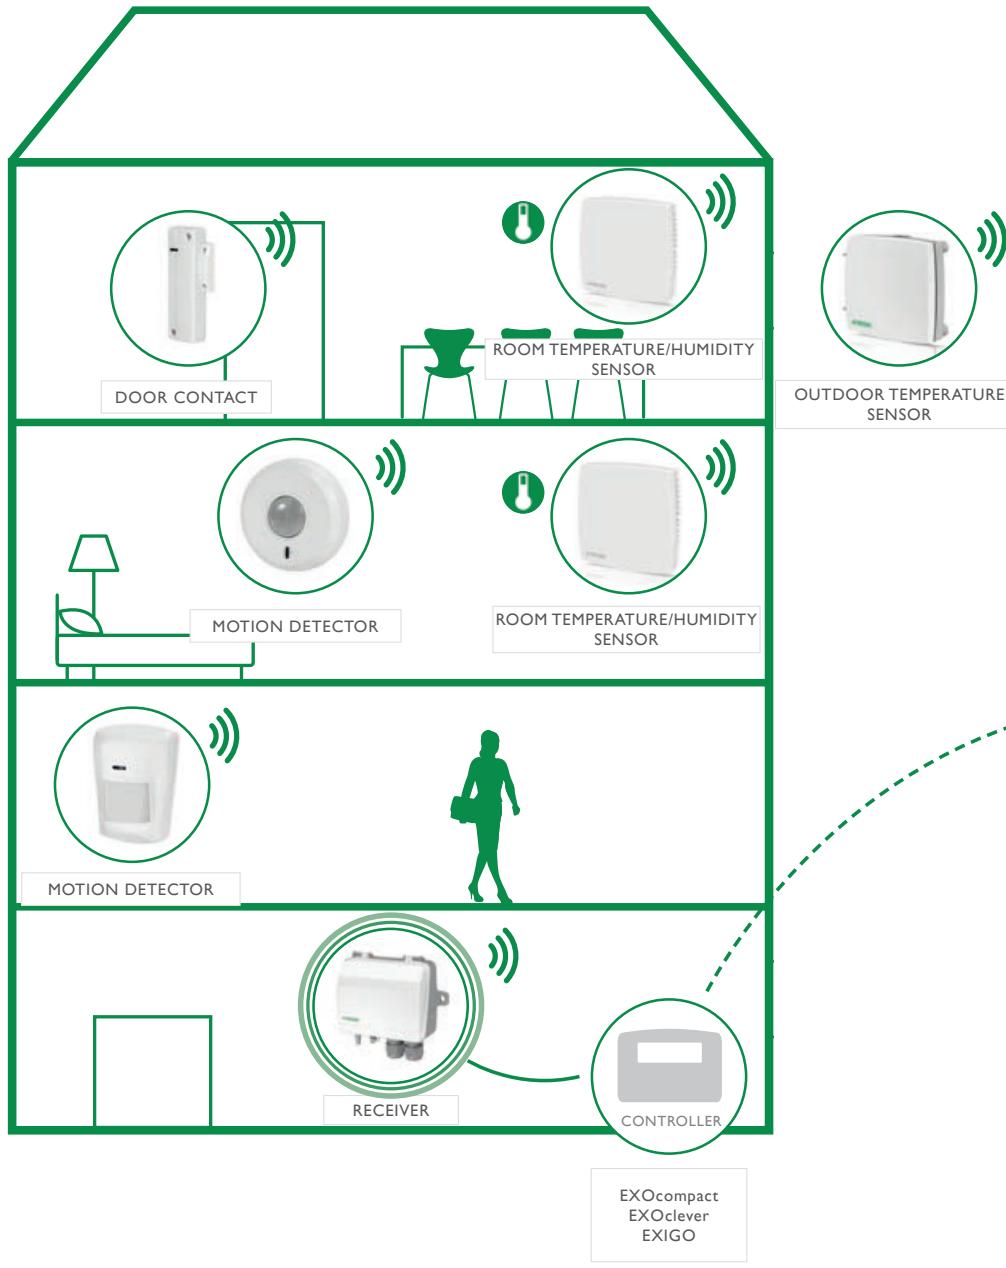

GO WIRELESS

WITH RELIABILITY IN FOCUS

- ✓ Install products on surfaces where you couldn't before, e.g. in heritage listed buildings with restrictions.
- ✓ The simple solution for flexible, module based offices – easy to move or add as needed. Easy to move when refurbishing.

SHORT FACTS

- ✓ Extensive communication range and high reliability
- ✓ Wireless = low installation costs + great timesaver
- ✓ Easy to integrate with Modbus based systems

After selecting valve with this quick guide, please check the catalogue section for the valve in question and product sheet to make sure you have chosen correctly according to differential pressure etc.

¹ Can be used as 2-way valve as well with the attached blind cover

² Use the -M version, i.e. NTVS50-39M for instance, contact Regin for prices.

ZONE VALVES

2-way radiator/zone valve, DN10-15, fixed kvs

Range of zone valves for control in aftertreatment systems. The valve can control water flow to cooling and heating batteries, radiators, convectors, chilled ceilings etc. and is intended to be used with the RTA(O)M100 thermal actuators.

Technical data	
Application	Heating systems, cooling systems, radiators, radiant cooling, ventilation systems
Pressure rating	PN10
Connection, actuator	M28 x 1.5
Max. leakage	0 % of the kvs value
Media temperature	5...100 °C
Stroke	1.7 mm
Material	
Body	Chromed brass CW614N
Seat	Brass CW614N
Stem	Stainless steel 1.4305

ΔPs constitutes the max. permitted differential pressure at which the valve actuator can safely close against the pressure.

ΔPmax constitutes the max. permitted differential pressure over the flow path of the valve for the entire actuating range of the actuator (i.e. open valve).

FVR

2-way radiator/zone valve, DN10-20, adjustable kvs

The zone valve is intended for zone control systems together with the thermal actuators in the RTA(O)M100 series. The valve can control water flow to cooling as well as heating batteries, such as convectors, cooling ceilings etc.

2-way, 3-way and 3-way (bypass) zone valves DN15-20, kvs 0.25-6.0

Valves for control of heating and cooling in fan-coil or chilled beams applications. The valves are intended to be used together with the thermal RTAN and RTAOM actuators. They are available as 2- and 3-way versions, as well as bypass versions. The valves have linear flow characteristics. The adapter for RTAOM...actuators is delivered with the valve.

Technical data	
Application	Heating systems, cooling systems, fan-coil units, ventilation systems
Pressure rating	PN16
Connection	BSP externally threaded according to ISO 228/1
Flow characteristics	Linear
Max. leakage	0 % of the kvs value
Media temperature	2...95 °C
Media	Hot water, cold water, glycol-mixed water (max. 40 % glycol)
Stroke	2.5 mm
Adapter	Included for RTAOM...actuators. No adapter is needed for RTAN... actuators.

2-way control valves, DN15-50, kvs 0.25-40, 20 mm stroke, DZR

2-way valves designed for control of cold, hot or glycol-mixed water, for use in DZR requirement systems or district heating within the temperature range -5°C...+150°C. They are pressure balanced (from DN20-50, not DN15) and can therefore handle high differential pressure with low force. The valves are intended to be used together with Regin's RVAN5 actuators. We also offer adapters for actuators of other brands.

Technical data	
Application	Heating, cooling, ventilation, district heating and district cooling system and systems requiring DZR-materials
Pressure rating	PN16
Connection	BSP externally threaded according to ISO 228/1; supplied with threaded connections
Flow characteristics	Equal percentage
Max. leakage	0.0 % of the Kvs value (PTFE gasket, carbon-filled 25 %, no leakage)
Media temperature	-5...+150 °C
Media	Hot water, cold water, glycol-mixed water (max. 50 % glycol)
Rangeability	100:1
Stroke	20 mm
Max. diff. pressure	1600 kPa

3-way control valves DN15-50, kvs 0.63-40, 20 mm stroke, DZR

Valves intended for control of cold, hot and glycol-mixed water in heating, ventilation and when DZR material is a requirement. The valves are intended to be used together with Regin's RVAN5 actuators. RVAN10 actuators can also be used if larger actuating force is required. The valve is supplied with a cover lid for converting the 3-way valve into a 2-way valve.

ACCESSORIES

ΔP_s constitutes the max. permitted differential pressure at which the valve actuator can safely close against the pressure.

ΔP_{max} constitutes the max. permitted differential pressure over the flow path of the valve for the entire actuating range of the actuator (i.e. open valve).

ΔPs constitutes the max. permitted differential pressure at which the valve actuator can safely close against the pressure.

ΔPmax constitutes the max. permitted differential pressure over the flow path of the valve for the entire actuating range of the actuator (i.e. open valve).

2- and 3-way on/off valves, DN15-32, kvs 3.2-10

Valves intended for on/off control of hot or cold water in heating or cooling systems. The valves can only be used together with Regin's RVAFC actuators. The valves are available as both 2- and 3-way models.

Technical data

Application	Heating systems, cooling systems, fan-coil units, ventilation systems
Media	Hot water, cold water, glycol-mixed water (max. 50 % glycol)
Media temperature	2...94 °C
Pressure rating	PN16 (240 psi)
Connection	Internal thread BSP according to ISO 228/1

FLANGED VALVES

2- and 3-way control valves, DN25-200, kvs 6.3-550, DIN-standard

Control valves for use in heating, cooling and ventilation systems. They are intended to be used together with Regin's RVAN actuators. The valves have DIN-standard lengths.

Technical data

Application	Heating systems, cooling systems, ventilation systems
Pressure rating	PN16
Connection	Flanged according to EN 1092-2
Flow characteristics	A - AB = equal percentage, B - AB = linear
Max. leakage	0 % of Kvs
Media	Hot water, cold water, glycol-mixed water (max. 50 % glycol)
Media temperature	-5...+120 °C
Rangeability	100:1 (DN50...200), > 50:1 (DN25...40)
Max. diff. pressure	If a smaller actuator than the suggested one is used, the max. differential pressure may be different. More information is available in the product sheet.

S0603080300	Spare parts kit, packing box, for ETRS, MTVS and MTRS valves (until 2019-12) also ETVS and NTVS.	

For steam applications or at pressure drops of 7 bar or higher, we recommend using a metal packing (stainless steel). Use the extra letter M at the end of the reference type when ordering a valve with metal packing, for example NTVS50-27M instead of the usual NTVS50-27. For valves with metal packing, the maximum leakage is 0.05 % of kvs.

The NTVS valves meet the requirements of DIN-standard DIN 3202/F1 and ISO 5752 table I.

BUTTERFLY VALVES

2-way wafer type butterfly valves, DN40-200, kvs 110-3120

PRESSURE INDEPENDENT CONTROL VALVES

Pressure independent control valves, DN15-32, 2.7/6 mm stroke

The valve is a combined differential pressure regulator, flow limiter and equal percentage control valve with full stroke and authority. The pressure independent control valves are suitable for constant or variable temperature systems and can be used as constant flow limiters in constant volume systems (with no actuators), or as pressure independent control valves in variable volume systems (with actuators).

THERMAL ACTUATORS

Thermal actuators 100/140 N, 2.5 mm stroke

Thermal actuator with position indicator for control of valves in heating or cooling systems. The actuator can be used to control radiator circuits, solar heating systems, heating or cooling coils, floor heating etc. To be combined with the VTTV/VTTR/VTTB range of valves.

Technical data	
Stroke	2.5 mm
Ambient temperature	0...50 °C
Connection	M30 x 1.5 metal ring
Dimensions	Ø 40 x 61 mm
Protection class	IP40 (IP44 when vertically mounted)

LINEAR VALVE ACTUATORS

Valve actuator for 0...10V or 3-position control

The RVAZ4 series of valve actuators are easy to mount and have a clear position indication which shows the position of the actuator. The actuator has manual manoeuvring.

The RVAZ4 models are intended for use together with Regin's valve ranges ZTV/ZTR, ZTVB/ZTRB and ZMD. The RVAZ4L1 models can be used for different brands of valves in combination with the OVA-L1 adapter.

Ball valve actuator for BV2/BV3 valves

Ball valve actuator with bi-directional motor mainly used in central air-conditioning systems, heating systems, water treatment, and production industry to control the flow of cold/hot media.

Technical data	
Ambient temperature	-5...+50 °C
Storage temperature	-30...+70 °C
Ambient humidity	Max. 90 % RH (non-condensing)
Protection class	IP54
Working angle	90°
Connection, actuator	Square 9 mm hole with M5 screw

ON/OFF ZONE VALVE ACTUATOR

Actuators for internally threaded 2- and 3-way valves

Actuator intended for on/off control of hot or cold water in heating or cooling systems. The actuator has a synchronous motor and spring return mechanism. It is intended for use together with Regin's ZFCM valves.

Technical data	
Supply voltage	230 V AC, 50...60 Hz
Control signal	On/off
Power consumption	6 VA
Opening time	Approx. 15 s
Closing time, spring	4...5 s
Ambient temperature	0...60 °C
Storage temperature	-20...+65 °C
Material	ABS
Dimensions	91 x 68 x 65 mm
Protection class	IP44

DAMPER ACTUATORS WITH SPRING RETURN

RDAS4S

4 Nm

Damper actuator with spring return, 4 Nm. For 2-point (on/off) or 0...10V control signal.

Technical data	
Mounting	Interior, weather protected
Damper shaft, round	8...15 mm
Damper shaft, square	6...11 mm
Damper shaft, min. shaft length	20 mm
Damper shaft, shaft hardness	<300 HV
Max. damper size	0.6 m ²
Torque	4 Nm
Protection class	IP54
Running time, actuator	60 s
Closing time, spring	15 s
Cable lenght	0,9 m (Maximum extension 300 m)

Frost protection unit

The electronic frost protection unit is mainly intended for use in air handling systems. If the temperature falls below the setpoint, the relays will fall and an alarm LED lights up. The unit should be connected to an NTC sensor placed on the heating coil or return water pipe. The frost protection unit has two alarm relays and manual or automatic reset. The sensor must have 0...30°C temperature range.

When there is frost risk, the device has a 0...10 V DC control output that can be used to override the valve.

CONTROL THEORY

CONTROL THEORY

CONSTANT SUPPLY AIR CONTROL

Constant supply air control (constant supply air, duct temperature control) is used when heated air is blown into a room at a constant temperature. A temperature sensor is located in the supply air duct. This sensor is connected to a controller (with P- or PI-function) and the controller is connected to an actuator with a valve. The controller can also control multiple actuators in sequence.

ROOM CONTROL

Room control (constant room temperature, extract air control) is used to maintain a constant temperature in the room. It is also used when the temperature in the room is variable due to draughts, machinery heat loads, etc. The supply air temperature will vary depending on whether it is necessary to heat or to cool the premises. A sensor located in the supply air duct dictates a minimum and a maximum supply air temperature so that air which is too cold or too hot is not blown into the room.

Regin's controllers have built-in cascade control. They, in turn, contain two controllers, P+PI or PI+PI. The first controller is connected to a sensor in the room and the second to a sensor in the supply air duct. The controllers are connected so that the output signal of the first controller forms the input signal of the second.

A temperature change in the room results in a change of the duct controller setpoint. The size of this change is determined by the cascade factor, CF. The cascade factor is the amplification at the first controller, i.e. the number of degrees by which the supply air temperature should be changed if the room temperature is changed by 1°C.

The main sensor is located in the room or in the extract air duct (if the average temperature of multiple rooms is required). The main sensor, together with the controller, determines the supply air temperature for each individual load. The controller can also control several actuators in sequence.

FROST PROTECTION – FROST PROTECTION SENSOR

The purpose of the frost protection sensor is to prevent the formation of ice in the air heating coil. If ice is allowed to form, the air heater may freeze and burst, with subsequent water damage. The location of the temperature sensor is of particular importance, since it must be able to sense when the temperature is too low. It can be difficult to determine where in the air heater the temperature is at its lowest.

The sensor can be placed on a pipeline (1), on the return (2), or on a pipe bend (3). The best location depends on the design of the heater. Some heating coils are fitted with a standard sensor receptor (4). A frost protection sensor may be electromechanical or electronic. The electronic frost protection sensor often has several functions:

A.	To stop the supply air fan at a certain temperature.
B.	To provide a minimum limit for the heating coil temperature when the fan is in operation.
C.	To maintain a constant coil temperature when the fan is non-operational. The outdoor air damper will close when the frost protection sensor stops the fan.

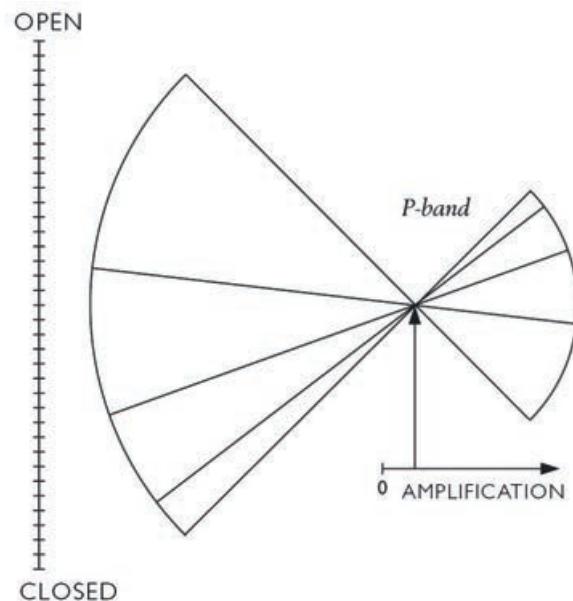

P-CONTROL, P-BAND

P-control stands for proportional control, i.e. a change at the sensor bears a certain relation to a change in the actuator. The magnitude of the actuator movement is determined by the amplification F . A small amplification results in a small movement for a given change, while a large amplification results in a large movement for the same change. However, the amplification F is not usually used in terms of comfort: instead, we refer to a P-band. The P-band is equal to $1/F$ (%). The P-band can also be expressed as the temperature change required for the actuator to move from closed to open position. Then the P-band value is specified in $^{\circ}\text{C}$.

One example of P-controllers is automatic thermostat valves fitted to radiators. When the temperature in the room drops, the valve opens to the corresponding extent. These valves usually have a P-band of 2°C , i.e. a change in the room temperature of 2°C is required for the valve to open fully, which means that the temperature in the room will vary within these 2°C . This is known as P deviation. It should then be possible for the P-band to be reduced in order to achieve a more even temperature, but the system would then become unstable, i.e. the valve would start to open and close continuously, with a fluctuating temperature (increasing and decreasing) as a result.

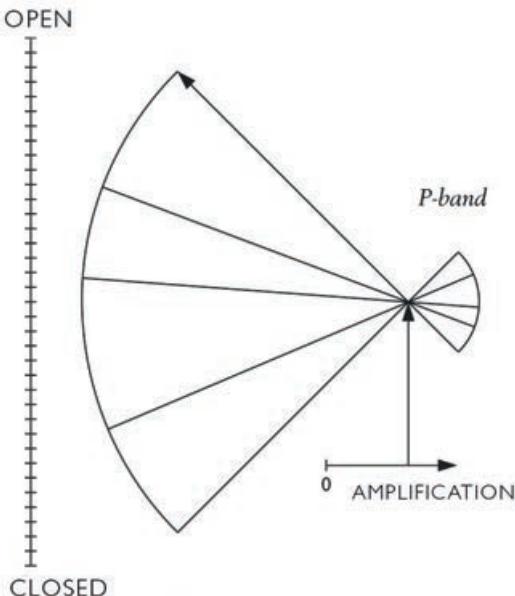

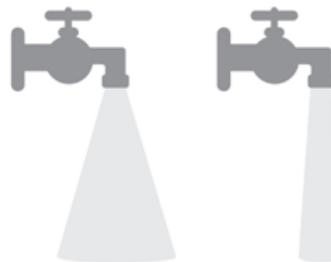

P-controllers are sometimes used for ventilation purposes in order to maintain a constant temperature, e.g. the supply air temperature. Then the P deviation results in an undesirable temperature variation. If P deviation is not required, it is possible to use a controller containing an integrator instead so that PI-control is achieved.

Small amplification means a large P-band

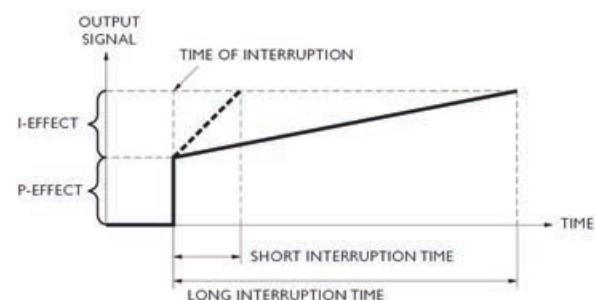

PI-CONTROL, I-TIME

PI-control is a combination of P-control and I-control. It is possible to compare PI-control with what happens when you fill a bucket with water - first you turn the tap on fully (P-effect) and then you gradually turn it off again (I-effect) until the bucket is full.

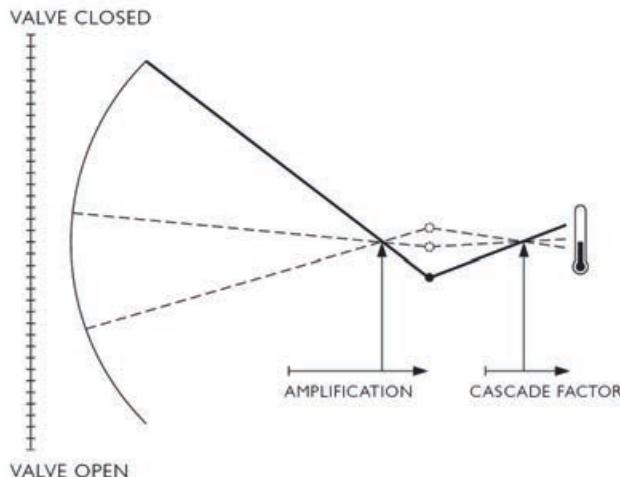

Large amplification means a small P-band

I-control means integrating control. This means a control link where the output signal is influenced by the magnitude and time of the input signal. A large deviation over a long period of time gives a large output signal and vice versa - a small deviation over a short period of time gives a small output signal. This signal is added to the signal from the P-controller. I-time is defined as the time it takes to increase the output signal to equal the value of the P stage.

CASCADE CONTROL, CASCADE FACTOR

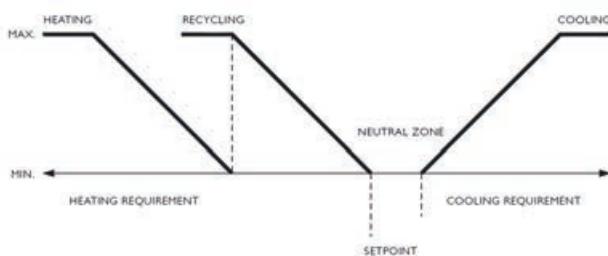

Cascade control is utilised e.g. for room control. Two controllers (P + PI or PI + PI) are used. The first controller is connected to a sensor in the room and the second to a sensor in the supply air duct. The controllers are connected so that the output signal of the first controller forms the input signal of the second. The cascade factor is the amplification at the first controller, i.e. the number of degrees by which the supply air temperature should be changed if the room temperature is changed by 1°C.

SEQUENCE CONTROL, NEUTRAL ZONE

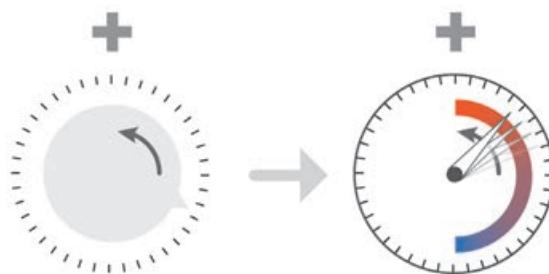

“Sequence” means “series” and therefore “sequence control” means “series control”. When using sequence control, several actuators (output signals) are controlled in sequence, i.e. one actuator moves to its end position first followed by the next actuator, and so on. Sequence control usually takes place in two (e.g. cooling - heating) or three (e.g. cooling - recycling - heating) stages.

A neutral zone can be set between the cooling stage and the heating stage. The neutral zone (Nz) will give the cooling stage a higher setpoint value. This leads to a saving in energy used for cooling and will result in greater comfort since no sudden cold will be experienced by a person entering the room.

SETPOINT CONTROL

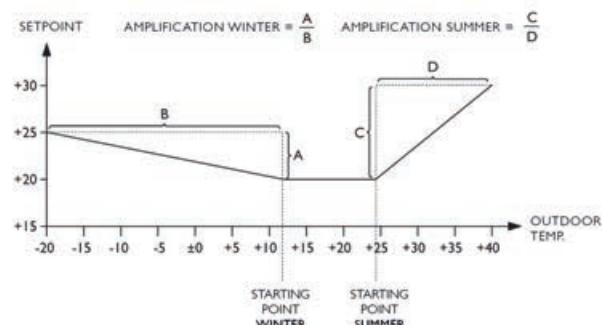

The SPC (setpoint control) input is used to change the desired temperature (setpoint value) from distance. This is done by displacing the setpoint value up or down. The input is adjusted to accommodate a standard signal, e.g. 0...10 V DC. At 5 V there is no effect, at 0 V the setpoint value is fully reduced, and at 10 V the value is fully increased.

OUTDOOR TEMPERATURE COMPENSATION

In some cases, it is desirable for the outdoor temperature to influence the main controller setpoint value, i.e. if the outdoor temperature falls below or exceeds a set value, the setpoint value is increased gradually. An outdoor sensor is then connected to the main controller via a separate unit.

Compensation can take place in the summer and/or in the winter. Summer compensation means that the setpoint value is increased when the outdoor temperature exceeds a set value, and winter compensation means that the setpoint value is increased when the outdoor temperature falls below a set value. An amplification factor for both summer and winter compensation determines the amount by which the setpoint value should be increased.
